ՏIGLENT՝

Programming Example: Open Socket LAN connection using Python

October 20, 2017

Automating a test can dramatically increase the productivity, throughput, and accuracy of a process. Automating a setup involves connecting a computer to the test instrumentation using a standard communications bus like USB or LAN and then utilizing code entered via a software layer (like LabVIEW, .NET, Python, etc..) to sequence the specific instrument commands and process data.

In this note, we are going to show how to use Python to create a communications link between an instrument and a remote computer using a LAN connection. Once the connection is verified, you can begin to work on the control software.

NOTE: This example requires open sockets on the instrumentation. At this time, not all SIGLENT products feature open sockets. Check the product page FAQs or with your local SIGLENT support office for more information.

Python is an interpreted programming language that lets you work quickly and is very portable. Python has a low-level networking module that provides access to the socket interface. Python scripts can be written for sockets to do a variety of test and measurements tasks.

Here is a Python 2.7 script that opens a socket, sends a query and closes the socket. It performs this operation in a loop 10 times:

PythonSocket_052018

You can follow the instructions below to build your own example:

1. Power on and connect the instrument to the network via LAN

2. Verify that the Gateway, Subnet Mask, and IP address of the instrument are valid for the network you wish to use. This information is typically located in the System Information or IO menu. See the specific instrument user's guide for more information on LAN settings.

3. Download python and your favorite python editor (I use IDLE):

https://www.python.org/

https://docs.python.org/2/library/idle.html

Start your python editor:

5. Open a new file by pressing File > New File.. and name the file

1			Untitle	d					_	×
		File	Edit	Format	Run	Options	Window	Help		
New File	Ctrl+N		1							
Open	Ctri+U									
Open Module	Alt+M									
Recent Files		•								
Class Browser	Alt+C									
Path Browser										
Save	Ctrl+S									
Save As	Ctrl+Shif	t+S								
Save Copy As	Alt+Shift	+S								
Print Window	Ctrl+P									
Close	Alt+F4									
Exit	Ctrl+Q									
			-							

6. Copy and paste the code at the end of this note into the file editing window:

🕞 PythonSocket.py - C:\Users\jayre\Documents\Application Notes\Python\PythonSocket.py (2 – 🛛	×						
File Edit Format Run Options Window Help							
<pre>#!/usr/bin/env python #-*- coding:utf-8 -*- # # The short script is a example that open a socket sends a guery</pre>	-						
<pre># The short script is a example that open a socket, sends a query, # print the return message and closes the socket. # import socket # for sockets</pre>							
<pre>import sys # for exit import time # for sleep #</pre>							
<pre>remote_ip = "192.168.0.17" # should match the instrument's IP address port = 5024 # the port number of the instrument service count = 0</pre>							
<pre>def SocketConnect(): try: #create an AF_INET, STREAM socket (TCP)</pre>							

7. Change the IP address and port number so that they match the IP address and port for the instrument you wish to connect to:

SIGLENT[®]

```
×
PythonSocket.py - C:\Users\jayre\Documents\Application Notes\Python\PythonSocket.py (2...
                                                                    File Edit Format Run Options Window Help
#!/usr/bin/env python
                                                                           ۰
#-*- coding:utf-8 -*-
±_____
# The short script is a example that open a socket, sends a query,
# print the return message and closes the socket.
#------
import socket # for sockets
import sys # for exit
import time # for sleep
#-----
            ____
remote ip = "192.168.0.17" # should match the instrument's IP address
port = 5024 # the port number of the instrument service
count = 0
def SocketConnect():
   try:
       #create an AF INET, STREAM socket (TCP)
```

Save the file:

		- Industriality							
	2	PythonSocket.py - C:\Users\jayre\Documents\Application Notes\Python\PythonSocket.py (2 – 🛛	×						
	File	Edit Format Run Options Window Help
