

# Programming Example: SDS Oscilloscope screen image capture using Python over LAN

March 08, 2019

Here is a brief code example written in Python 3.4 that uses a socket to pull a display image (screenshot) from a SIGLENT SDS1000X-E scope via LAN and save it to the local drive of the controlling computer.

**NOTE:** This program saves the picture/display image file in the same directory that the .py file is being run from. It will overwrite any existing file that has the same name.

Download Python 3.4, connect a scope to the LAN using an Ethernet cable, get the scope IP address, and run the attached .PY program to save a bitmap (BMP) image of the oscilloscope display.

You can download the .PY file here: [Python\\_Socket\\_SDS\\_SCDP.zip](#)

## Tested with:

Python 3.4  
SDS1202X-E  
SDS1104/1204X-E  
SDS2000X-E Models  
SDS5000X Models

```
#!/usr/bin/env python 3.4.3
#-*- coding:utf-8 -*-
#-----
#The short script is a example that open a socket, sends a query to return a
#screen dump from the scope, saves the screen dump as a BMP in the python
folder,
#and closes the socket.
#
#Currently tested on SDS1000X-E,2000X-E, and 5000X models
#
#No warranties expressed or implied
#
#SIGLENT/JAC 03.2019
#
#-----
import socket # for sockets
import sys # for exit
import time # for sleep
#-----
