Compatibility between Versions

Source Version	Object Version	Compatibility
5.0.0	5.4.0	Yes

Update instructions

1. Please prepare a FAT32 format USB flash driver. Copy all the files to **the root directory of USB flash driver**.

Notes: Recommend to use 8GB FAT32 Kingston USB flash driver.

2. Insert the USB flash driver. Then restart the instrument. It will take about three minutes to recover the system. When the instrument gets into the using interface, it means that the recovery system successfully.
3. When the system recovery successfully, please delete all the recovery files of the USB flash drive and upgrade it to the latest firmware. If you do not delete the recovery files, these files will be run again when the instrument reboot.

Notes: After upgrading the OS version, you need to upgrade the latest firmware, otherwise some functions will be abnormal. If there are display problems after upgrading, please execute Recall - Factory Default.
