Revision History

Version	Revision
V1.0.3.1.21 2023/09/6	1. Fixed the defects related to the flatness list function 2.Fixed the defects related to SCPI command 3. Fixed the defects related to the VNC function.
V1.0.3.1.19R5 2020/04/28	1. Fix a bug for power meter function 2. Fix a bug for power meter filling flatness
V1.0.3.1.19R2 **2019/04/16**	1. Add the function of flatness, new version provide two types to fill the flatness table. One is automatically with the power sensor or according to set the frequency step or the points to fill the flatness table 2、 Add function of adjust reference accuracy 3、 Solution some bugs of pulse train function 4、Optimize the AM performance 5、 Solution some bugs of the FM function 6、 Solution some bugs of the VNC control
V1.0.3.1.18 2018/11/1	1. Add option of upgrade BW form 2.1GHz to 3.2GHz 2. Optimize UI operation 3. Optimize the state file 4. Optimize the IP state symbol 5. Optimize the preset 6. Optimize the LF sweep trigger

Update Instructions

1   Note: During the updating, do not cut off the power or pull out the U-disk.

1. Please firstly copy the update file (.ADS) to a U-disk.

2. Insert the U-disk.

3. Press **UTILITY**, we can enter **Update** in UTILITY menu.

Figure 1 UTILITY function menu

4. Press **Update** and then enter the file system (or you can press **Store/Recall** button to enter the file system).

Figure 2 File system

5. Select the update firmware which should be with an ADS postfix. Press **Recall** to start the update. A progress bar is displayed during the update. After the update is completed, the generator will restart automatically.

6. After the signal generator restarted, we can check the version information in System Info.
